

SNOW FENCE SYSTEM

Overview

The Snow Fence System by Anchor Products™ is a complete snow retention system designed to be used with Duro-Last® roofing materials, giving building owners and contractors a reliable, engineered, and tested solution*. The Snow Fence System utilizes the U-Anchor™ 3000s Series plate (the smaller version of the U-Anchor™ 3000 Series anchor) to provide a tighter bolt spacing while maintaining superior strength and confidence when it comes to holding back snow on commercial roofing systems.

The Snow Fence System has been tested by third-party engineers and each system is manufactured specifically for your location and roof assembly using ASCE 7 Design. Featuring a design built to handle extreme loads, the Snow Fence System allows for fewer attachments and reduced labor. Additionally, this system uses preflashed and custom-fabricated components, making installation significantly faster and the assembled system better looking while providing a more consistent performance over field fabricated materials.

Features:

- Permanent lightweight snow fence combined with Duro-Last's superior waterproofing to meet your project's needs
- Low-profile snow bars eliminates the need for snow flags that prevents snow creep
- System utilizes U-Anchor™ 3000s Series attachments manufactured using Duro-Last® 50 mil white membrane (standard colors available)
- The U-Anchor™ installs in less than 5 minutes while the snow fence system installs quickly & easily - reducing on-site labor expenses
- The snow fence system is manufactured of high tensile aluminum and boasts superior loads allowing for increased spacing of brackets - reducing material costs
- More options:
 - Snow retention components supplied in mil finish as standard (custom colors available)
 - Standard membrane colors available
 - Calculation Assistance Available

*The following results were tested in accordance with TAS 117095, Appendix B-test procedure for Dynamic Pull-Through Performance of Roofing membranes over fastener heads or fasteners with metal bearing plates.

- Tension Average Ultimate Design Load of 4422 LB
- Shear Average Ultimate Design Load of 7592 LB

Snow Fence System Is A Vital Component Of Your Total Roof System

U-Anchor™ 3400s PVC

Snow Bracket Kit

Pipe Kit

Finishing Kit

SNOW RETENTION FENCE INCLUDES:

U-Anchor™ 3000s Series

Snow Bracket Kit - Snow Brackets (5052 aluminum) with Stainless Steel Flange Nut and Washers

Pipe Kit - 8' x 1" OD Aluminum Pipe and Splices

Finishing Kit - End Caps, Collars

ADVANTAGES

U-Anchor™ 3000s Series anchors are included in all Duro-Last® warranties when purchased through Duro-Last.

U-Anchor™ 3000s Series anchors are watertight and tested for load capacity.

Easily installed with minimal parts.

Snow Fence brackets and pipes are made with corrosion resistant aluminum.

Snow Fence can be installed any time of the year.
